

October 3, 2018

Dear Prof. Khachaturian,

We would be grateful if you would consider our manuscript entitled, '*Fine tuning cognitive assessment in the elderly: The benefits of an online test battery*' for publication as a short report in *Alzheimer's and Dementia*. Our study addresses the increasingly important issue of how to accurately and efficiently monitor cognitive changes in the aging population. As you will see, our results demonstrate that a novel online cognitive test battery improves the accuracy of currently used methods, while reducing administrator burden and practice effects. This online testing battery may have significant consequences for care and quality of life in the aging population.

Sincerely,

Avital Sternin, Jessica A. Grahn, & Adrian M. Owen
